

SIBGAH RABBANI KUSUMA

Mobile & Frontend Developer

sibgahrk190@gmail.com | +62 813-1414-7941 | Tangerang, Indonesia | [linkedin.com/in/sibgah](https://www.linkedin.com/in/sibgah)

PROFILE

I am a passionate and dedicated Informatics student with a keen interest in software development and a solid foundation in programming and system design. With experience in creating user-friendly applications and platforms, I excel in turning ideas into functional and innovative solutions. I am constantly enhancing my skills through various courses and projects, aiming to contribute effectively to the tech community.

WORK EXPERIENCE

Mobile Developer — PT Sigma Cipta Caraka (Telkomsigma)

June 2025 – December 2025 | Internship Program

- Engineered and deployed a high-performance cross-platform mobile application using React Native to digitise key HR and administrative functions for 2300+ employees and enhancing operational efficiency, enabling secure and responsive user experiences on both iOS and Android.
- Performed application maintenance and bug fixing on live products, consistently maintaining app stability and performance.
- Integrated REST APIs into the mobile application to enable real-time data exchange between client and server.
- Managed application state using Redux to ensure a consistent and efficient data flow across all components.
- Collaborated actively with backend engineers and UI/UX designers throughout the feature development lifecycle, from requirement analysis to implementation and testing.
- Utilized Git/GitHub for version control, code reviews, and branch management within an organized team development workflow.

Frontend Developer — PT Humanis Siber Indonesia

Apr 2025 – Jun 2025 | Freelance

- Designed and developed conversion-focused landing pages using Vue.js and Tailwind CSS with clear CTAs and intuitive user flows.
- Ensured full responsiveness and WCAG-aligned accessibility across mobile, tablet, and desktop viewports.

Frontend Developer — Cangopi

June 2024 – December 2024 | Internship Program

- Built a web-based Point of Sale (POS) application using Laravel, covering end-to-end frontend implementation for cashier and warehouse management workflows.
- Developed a cashier transaction module enabling smooth order processing, payment handling, and receipt generation for daily operations.
- Implemented a menu management feature allowing staff to add, update, and remove menu items with real-time reflection on the cashier interface.
- Created a stock reporting module to track inventory levels, monitor warehouse movements, and generate stock summary reports.
- Collaborated closely with the backend team to align API contracts, ensuring seamless data flow between frontend views and server-side logic.
- Applied component-based UI development principles to build reusable, maintainable frontend components across the application.

UI/UX — CV. Anakpipa Sinergi Pratama

Jun 2023 – Jul 2023 | Freelance

- Designed a web interface for a B2B sales employee platform (pipe & system components), focusing on task efficiency and navigation clarity.
- Conducted user research to identify pain points, then translated findings into wireframes and high-fidelity Figma mockups with interactive prototypes.

- Iterated designs through two client feedback rounds, balancing aesthetic and functional requirements within tight timeline constraints.

PROJECTS

Pradita Canteen Food Order System — *Academic Project*

Flutter, Firebase, Dart | Role: Fullstack Developer | Mar 2025 – May 2025

- Designed and developed a full-featured mobile food ordering application for the university canteen using Flutter and Firebase, handling both frontend and backend responsibilities.
- Implemented secure user authentication with role-based access control for three user types: customer, seller, and admin.
- Built an end-to-end order flow including food browsing, cart management, and payment gateway integration for seamless in-app transactions.
- Developed a real-time push notification system to keep customers informed of order status updates from placement to completion.
- Created an order history module allowing users to view past transactions with detailed order summaries.
- Built a seller panel for merchants to manage their menu listings, track incoming orders, and update order statuses in real time.
- Developed an admin panel for overall platform management including user management, seller approval, and transaction monitoring.

Summarecon Serpong Internal Website — *Academic Project*

Figma, UI/UX Design | Role: UI/UX Designer | Sep 2023 – Dec 2023

- Designed an intuitive interface for an internal document management system used by employees, aimed at streamlining access, organization, and retrieval of documents.
- Created user flows, wireframes, and high-fidelity mockups using Figma, ensuring a seamless and consistent user experience across the platform.
- Conducted user research and requirement analysis to understand employee workflows and pain points, directly informing design decisions.
- Developed interactive prototypes for usability testing and stakeholder presentations, enabling early feedback and iterative design improvements.
- Applied UI/UX best practices to enhance navigation, reduce complexity, and improve task efficiency for users handling large volumes of data.
- Collaborated closely with developers and project stakeholders to ensure accurate implementation of design specifications.
- Delivered final design assets and a design system documentation to support future scalability and development consistency.

EDUCATION

Bachelor of Computer Science (S.Kom) — **Pradita University**

Tangerang, Indonesia

Senior High School (Multimedia) — **SMK Islamic Village**

Tangerang, Indonesia

TECHNICAL SKILLS

Mobile Development: React Native, TypeScript, JavaScript, Flutter,

State Management: Redux, Zustand

API & Backend Integration: REST API (Axios/Fetch), Firebase (Auth, Firestore, Realtime DB), MySQL

Tools & Version Control: Git, GitHub

Web Frontend: Laravel (Blade), HTML, CSS, JavaScript, Tailwind CSS, PHP

Collaboration: Agile/Scrum, Figma (design handoff), Cross-functional teams
